June 2006

Micromeritics Analytical Services recently received a fully intact, adult male, red squirrel skull from the University of Massachusetts, Biology Department. Researchers were requesting true density measured using gas pycnometry. Dr. Sean Werle, plans to compare the bone mass or bone density found in bats, shrews, and rodents. He also hopes to correlate the bone mass to other measurements already obtained.

Thank you, Dr. Werle and we are proud to assist you in your research.
